Benutten van Onderzoeksdata vereist samenwerking

Onderzoekers besteden veel tijd aan het regelen van toegang tot de systemen en diensten die ze nodig hebben om hun onderzoek verantwoord te doen.

Onderzoekers kunnen vaak niet beschikken over een **directe toegang** tot de systemen en diensten (zoals virtuele samenwerking omgevingen) voor het gebruik van SotA Data Science Tools.

Onderzoekers kunnen vaak niet beantwoorden aan relevante regelgeving en standaarden om veilig te kunnen omgaan met researchdata.

LivinG-Lab AI ETHICS](https://www.researchgate.net/publication/357933768_N_O_MORE_SECRETS_AIRA_LivinG-Lab_AI_ETHICS)

Context

Door verregaande **Digitalisering** in toegepast onderzoek is **Data Science** een belangrijk onderdeel geworden van de dagelijkse onderzoekspraktijk.

Samenwerking binnen het eigen vakgebied of multidisciplinair, binnen of buiten de grenzen van een instelling is een andere al langer bestaande trend om beter gebruik te kunnen maken van elkaars kennis en sneller tot resultaten te komen.

Context

Niet langer Excel-sheets naar elkaar mailen, maar een veilige en controleerbare manier om gemakkelijk data te verwerken binnen en tussen instellingen.

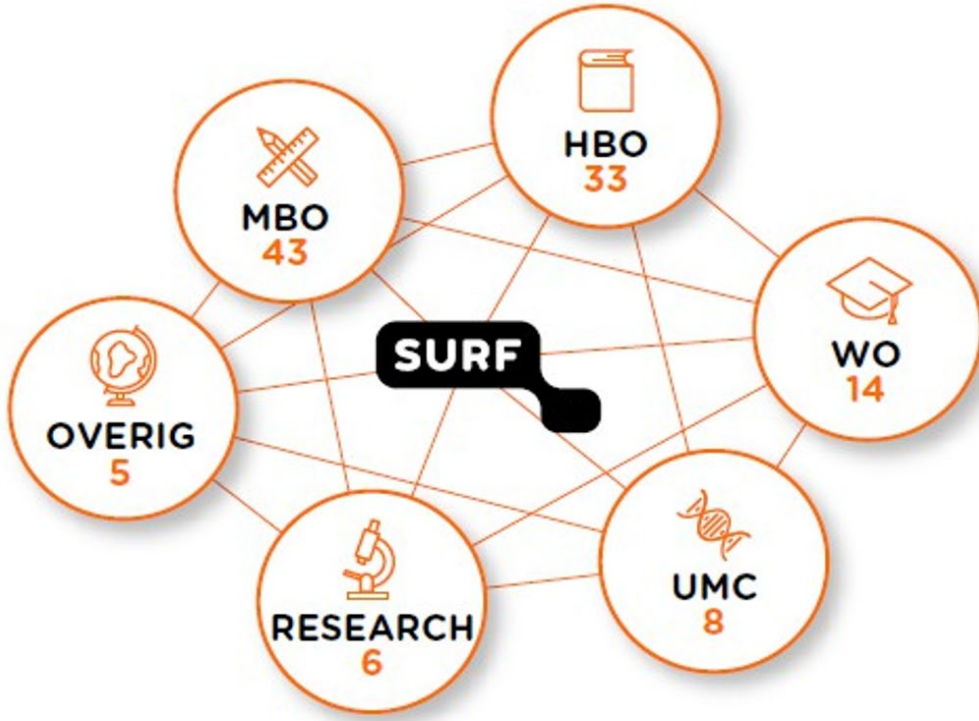

Onderzoekers vragen om virtuele onderzoekswerkruimten **[VREs]**

→workspaces←

die laagdrempelig in het gebruik zijn;

waarbinnen ze FAIR, veilig, schaalbaar en automatiseerbaar kunnen samenwerken, over instellingsgrenzen heen.

Context

Driving IT innovation in education and research

Together with our members, we ensure that the education and research community has access to the best and latest IT facilities for top-level research and talent development.

Wat is SRAM?

SURF Research Access Management

[SRAM] faciliteert onderzoekssamenwerking door gebruik making van een 'modulaire componentstrategie' (een blokkendoos) in combinatie met een op **Data Science** (DS) gebaseerde IT (**informatie technologie**) infrastructuur.

SRAM

SURF Research Access Management (SRAM) is een beheerapplicatie om onderzoekers snel en veilig toegang te geven tot onderzoeksdiensten: een samenwerkingsverband ('collaboration') aanmaken, leden uitnodigen en onderzoeksdiensten koppelen.

SRAM zorgt er dan automatisch voor dat accounts worden aangemaakt in de gekoppelde onderzoeksdiensten. Onderzoekers van deze collaboration kunnen vervolgens met hun instellingsaccount inloggen bij de gekoppelde onderzoeksdiensten.

Wat kan SRAM?

Gebruikersbeheer

Authenticatie

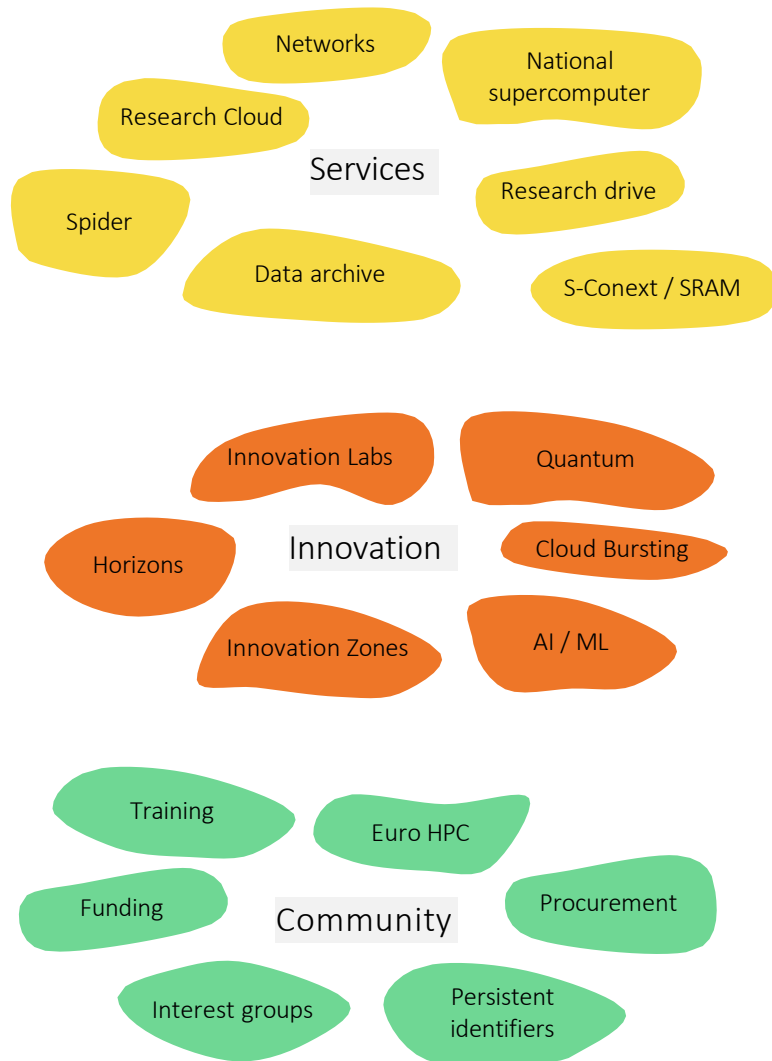

Koppelen van IT-diensten

ABAC: Attribute Based Access Control

ABAC houdt in dat er geen autorisaties aan een persoon worden gegeven op grond van identiteit of plek in een organisatie, maar op basis van attributen van een identiteit.

SURF is / does many things to (help) research

Example
building
blocks...

ROLLEN + COLLABORATION

SRAM kent twee rollen:

Beheerders

Onderzoekers/leden

Wie / Rollen

Per onderzoek is er een medewerker die de **collaboration** beheert.

Om gebruik te kunnen maken van de **workspaces** van de HR en de extra ondersteuning van Team Research Support & IT is het aan te raden om een medewerker van dit team (Research Support & IT) admin rechten te geven binnen de collaboration.

SRAM kent twee rollen: beheerder en onderzoeker/leden.

BEHEERDERS VAN COLLABORATIONS IN SRAM KUNNEN:

- eenvoudig het onderzoeksteam beheren;
- onderzoekers betrekken van binnen en buiten Nederland, zowel van instellingen als van bedrijven, overheid etc.;
- beheren welke onderzoeksdiensten gebruikt kunnen worden door hun teamleden;
- teamleden aan groepen binnen de CO (Collaborative Organization/Collaboration) toevoegen (b.v. voor autorisatie in gekoppelde onderzoeksdiensten);
- zien wie welke toegang wanneer heeft toegekend.

LEDEN VAN COLLABORATIONS IN SRAM KUNNEN:

- inloggen met hun instellingsaccount;
- gebruik maken van één van de gast-account-opties om in te loggen op de SRAM-omgeving;
- meer dan één gast uitnodigen via eduid;
- hun profiel beheren, zoals zien tot welke diensten ze toegang hebben en SSH-keys uploaden om automatisch te synchroniseren op alle betreffende systemen;
- snel toegang krijgen tot diensten die ze nodig hebben voor hun onderzoek(en).

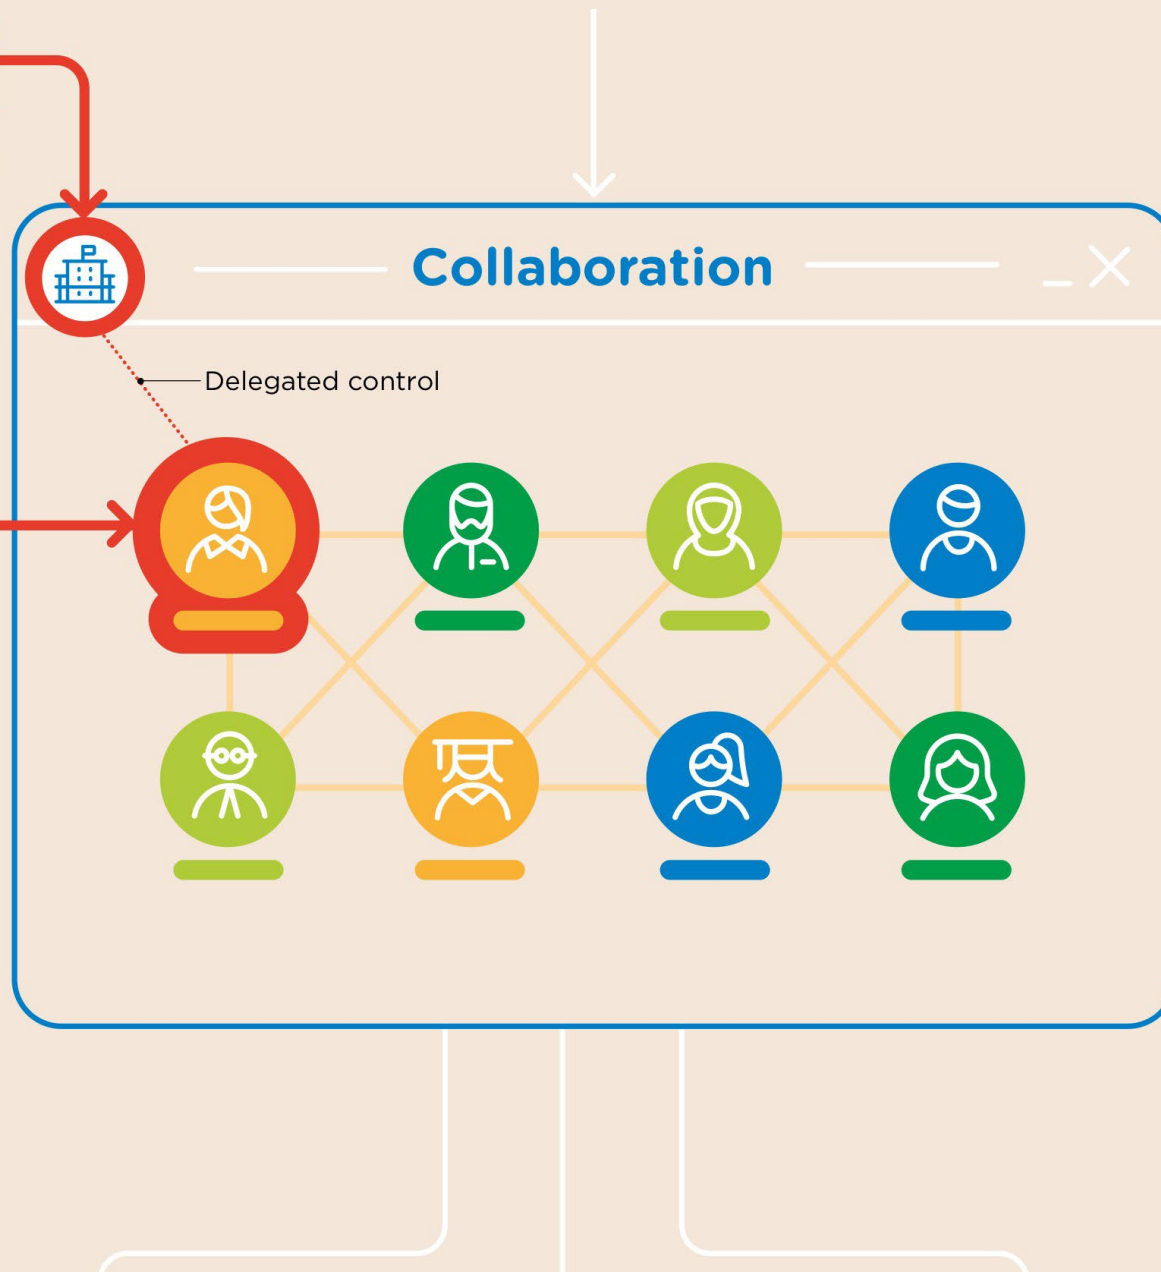

COORDINATING INSTITUTION

The coordinating institution has signed an agreement with SURF to use SRAM for their collaborations. This institution acts as the data controller for these collaborations.

PRINCIPAL INVESTIGATOR

The principal investigator (P.I.) acts as collaboration administrator and:

- initiates the collaboration
- invites others to join
- makes services accessible for this collaboration after arranging necessary agreements
- can appoint other collaboration administrators

Access routes to research services

[Direct contracts, such as RCCS](#) Give organisations direct access to SURF compute facilities on a contract basis.

[Small NWO grants](#) To run a pilot project (1/year), you can apply for limited amounts of compute, storage and support directly via SURF.

[Large NWO grants](#) for large scale* research projects need to apply via NWO.

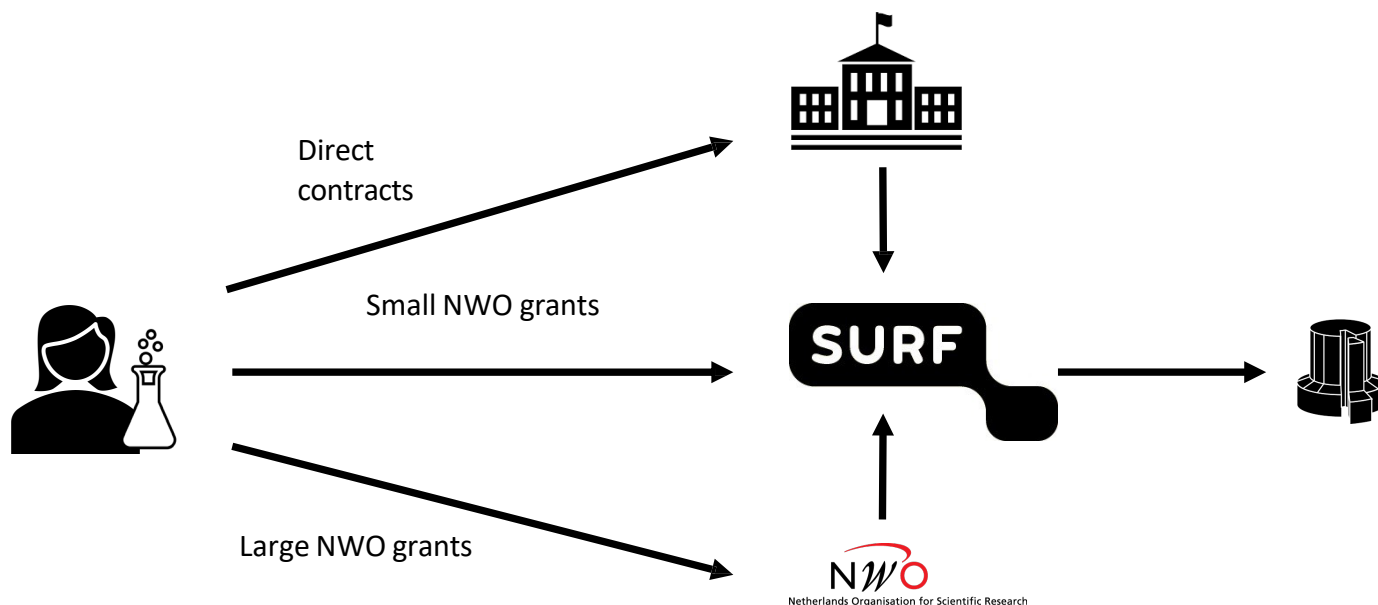

Open calls for [public cloud access](#).

***Large Scale Defined:**

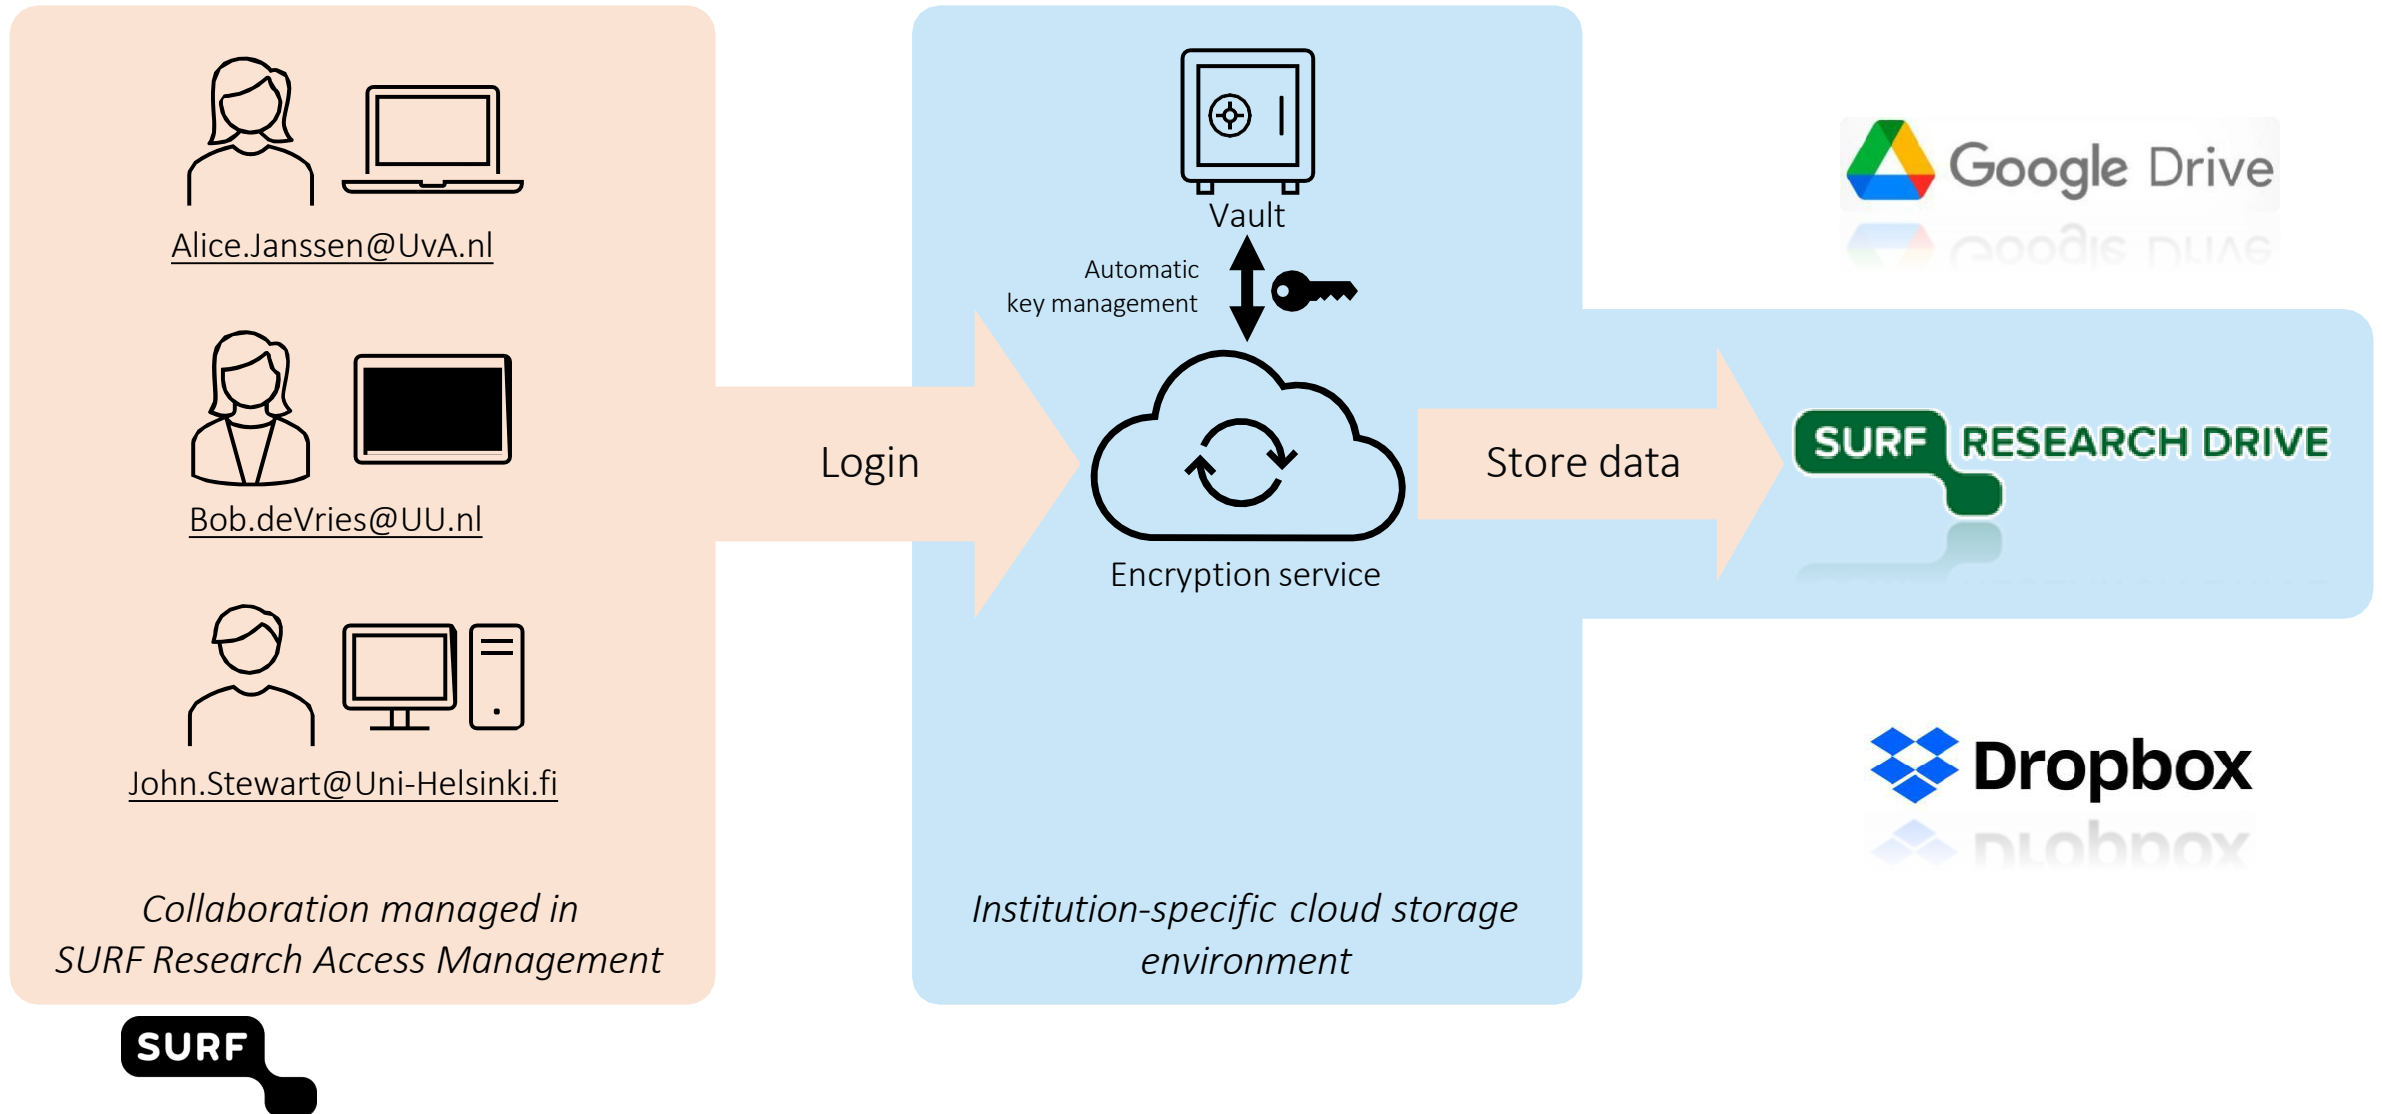

- +1.00.000 CPU of GPU SBU **Snellius Supercomputer**
- +50.000 CPU core-hours **HPC Cloud (Research Cloud)**
- +5.000 GPU-hours **HPC Cloud (Research Cloud)**
- +500.000 CPU core-hours **Grid/Spider**
- +10.000 GPU-hours **Grid/Spider**
- +100.000 CPU core-hours **Cloud Research Consultancy (MS4/CCS)**
- +10.000 GPU hours **Cloud Research Consultancy (MS4/CCS)**

Incl. varying amounts of disk-, tape-storage, research drive and support.

SBU = System Billing Unit

| User-friendly encrypted cloud storage

SURF Research services

Compute

We provide accessible and economical computing capabilities for researchers

High performance computing	Data Processing / HTC	Cloud Computing
The National Supercomputer Snellius	SPIDER	SURF Research Cloud
OSSC / Confidential computing	GRID	HPC Cloud
JupyterHub for Education		Public Clouds
		SANE / Confidential Research Cloud
Consultancy on HPC, HTC, AI / ML, Cloud & Visualization		

We help both high demand, large scale users through Snellius, Spider and GRID, as well as provide accessible plug-and-play services through Research Cloud and Public Cloud providers.

Data

We help researchers organize, store, preserve and share data

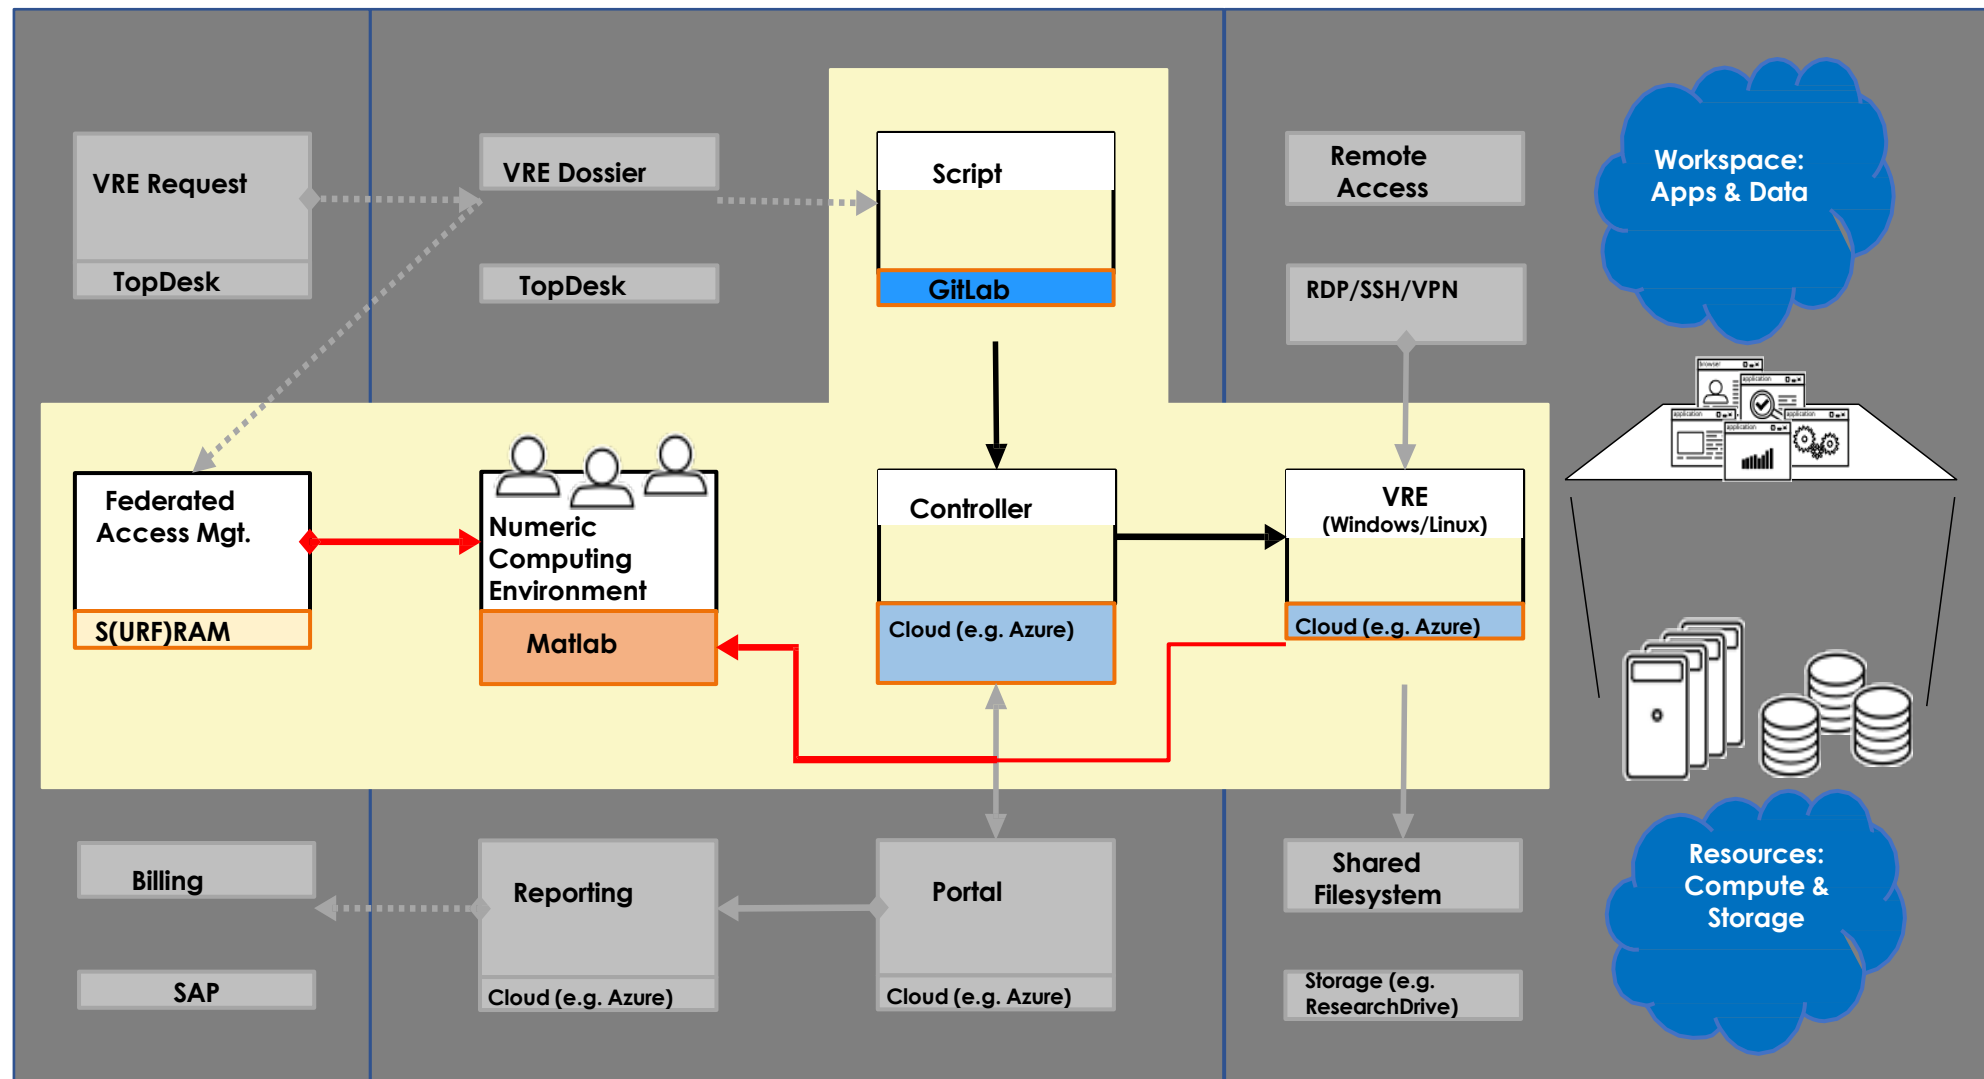

Sync & Share	General Storage	Long-term Storage	Research Data Management
Research Drive	Object Store	Data Archive	Yoda Hosting
SURF Drive	dCache		RDM Scale-out
SURF FileSender			iRODS hosting
			ICE
Consultancy on Storage, Preservation & Research Data Management			

We provide trustworthy, secure & economical data storage for researchers through Research- & SURF Drive, Object Store and Data Archive. And promote data management according to the FAIR principles.

Easy and secure access to research services for research collaborations

Log in

New to SURF Research Access Management? Log in and create a collaboration with your institution.

Create

admin function

Administrators create a collaboration page for their community. They then select services from the catalog to make them available to collaboration members.

Invite

admin function

Administrators invite fellow researchers to their collaboration page. They can also ask other administrators to help manage the collaboration.

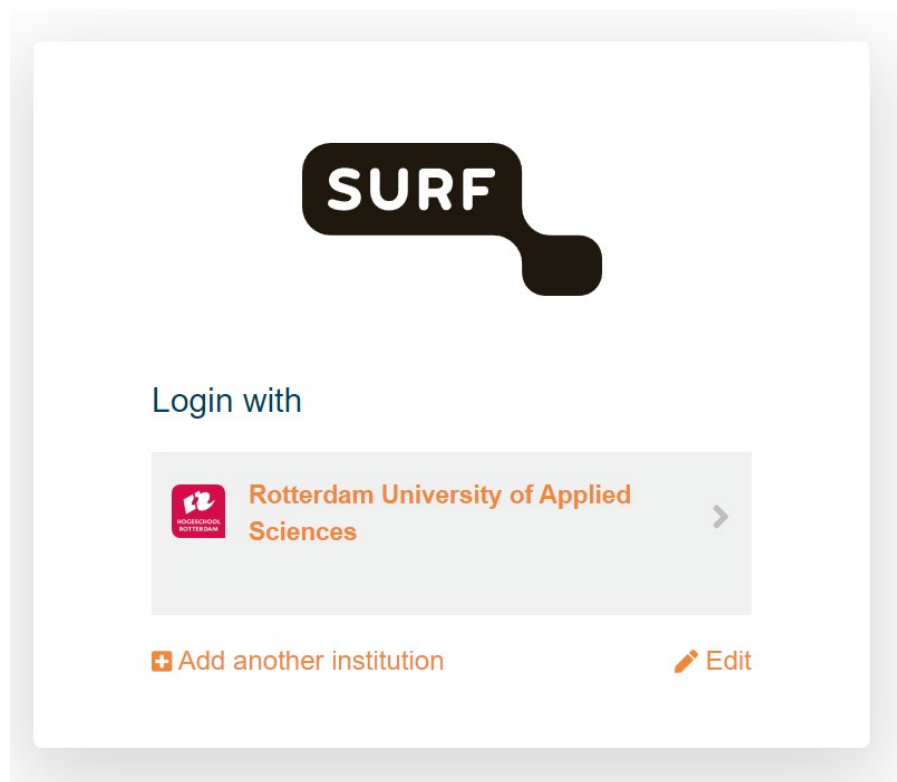

Join

Invited researchers join by logging in with their institutional account or eduID.nl.

Collaborate

The secured collaboration page shows its members and gives access to the research services.

[About](#) [Policies & Support](#)

Welcome to SURF research cloud

If you have your credentials ready, you can log in. If you do not have access to this portal, you can find out how to request access through our [documentation pages](#)

Set up a workspace

Workspaces are the environments which you run to process your data in. Within your workspaces, you can run catalog items and datasets from our catalog or use your own software.

Collaborate with others

You can create collaborative organisations where you can invite your fellow researchers to work as a team in a specific workspace. Each team member can share their own data, wallet or catalog items.

SRAM CLOUD FUNCTIONALITY

For ease of use and plug and play compute: go to [Research Cloud](#).

For very powerful parallel computing; go to [Snellius](#).

For structurally processing very large amounts of data: go to [Spider](#).

For easy storage and data sharing; go to [Research Drive](#).

For economical long-term storage; go to [Data Archive](#).

For advice and POC's on public clouds; go to our [Cloud Consultancy team](#).
